

LEARN AT CHESTER ZOO

An extremely high risk of becoming Extinct in the Wild

Name	Javan Green Magpie.
Scientific Name	<i>Cissa thalassina</i> .
Threats (why they're at risk)	Habitat loss and degradation, driven by agricultural expansion, logging and mining. Illegal poaching for the songbird trade.
Distribution (where they live)	Endemic to Western Java, Indonesia.
Habitat (what they live in)	Mountain forests, occasionally ranging into lowland areas.
Diet/Feeding strategy (what they eat and how they eat it)	Mostly invertebrates and small vertebrates, including frogs and lizards.
Social behaviour (how they live)	Breeding takes place throughout the year, with a preference for the months with high rainfall (October-April).
Males and females	No notable difference between males and females.
Lifespan (how long they live for)	Unknown.
Number of young (how many babies)	Usually one or two individuals.
Interesting fact	The bright green plumage is attained through the birds diet, if not kept correctly they can turn blue.
